

# **Wedding Management System**

**Date:**30-08-2022

**Guid:** Rini Kurian

## **1. Project Overview?**

A) The wedding management system is a python web application which helps to organize successful wedding events for users. This application provides an easy way to plan their special events. The user can add all the details of the event and can get the service. The user can select the type of event, type of food to be served, type of decoration and estimated budget. All the details given by users will be verified by admin. Admin will add all the details of the planner based on the requirement of the user and send the user's event details to the planner. The planner will verify and send his response with a confirmation mail. The user needs to complete the payment process to confirm the order

## **2. To what extend the system is proposed for?**

A) The proposed Wedding Event Planner system provides a smart way to users in booking the venue for the event. The user can book the venue from anywhere and at any time which saves a lot of time and not the physical effort is required. All the details given users are stored in the database with high-level security which can be checked frequently and can be modified at any time by authorized members of the application.

## **3. Specify the Viewers/Public which is to be involved in the System?**

*A) Public users can create account on the system and use and search the features in the system.*
